

Dräger Acute 2003

The Acute 2003 is a complete, quick-to-use resuscitation unit which will be of equal interest in emergency services, general practitioners and hospital personnel. The device concept drew on experience from all areas.

Features

Among the outstanding features of the Acute are the 100% by volume oxygen delivery, the simultaneous operation of several components and a "one-third hatch" which offers easy access to the main accessories even in confined spaces.

Even from a distance, the robust, highly condensed polyethylene case is clearly visible thanks to its bright orange colour. Depending on how much space is available at the scene of the emergency the pack can be used either in upright or horizontal position. Both sections of the lid can be opened out of 180°C.

Equipment

Inside the Acute no space is wasted, as all the contents are ergonomically arranged. The pack contains everything emergency ventilation requires - the main component is a 2.5 L oxygen cylinder equipped with an Alduk I compact pressure reducer. This features two 5 bar outlets and an inhalation nipple which is adjustable in steps between 0-15 L/min using the flow regulator.

Additional components

- Oxidem 3000 demand valve for flow-controlled
- resuscitator 2000 manual ventilation bag, including masks
- subjector 2000 bronchial aspirator
- an inhalation mask
- all connections hoses needed for operation

TECHNICAL SPECIFICATIONS

Dimensions	600 x 200 x 240 mm
Weight incl contents	Approx. 7 kgs
Pack material	Polyethylene, highly condensed
Clip fasteners	Polyethylene, replaceable
Capacity O ₂ cylinder	2 liter
Filling pressure O ₂ cylinder	200 bar
Material O ₂ cylinder	Steel
